

Objective

To provide a directory of local airport locations and air traffic frequencies to allow UAV operators the ability to monitor air traffic in their area of operation.

Definitions

- I. AWOS - Automated Weather Observing System is an airport weather system that provides continuous, real-time information and reports on airport weather conditions.
- II. CTAF - Common Traffic Advisory Frequency is the name given to the VHF radio frequency used for air-to-air communication.
- III. UNICOM - provide pilots, upon request, with weather information, wind direction, the recommended runway, or other necessary information.
- IV. If you wish to enter other airport frequencies because of your potential service area, please find below a few to consider with more information available via <https://www.airnav.com/airports/>.
- V. **Note: Emergency Radio Frequency: 121.5**

Local Airport Information

(Click on this table and edit contents) then click on (Plus Sign at bottom right) to start another entry.

Airport Name/Identifier				County	
Address					
City		State		Zip	
Point of Contact Name				Title	
Phone		Email			
AWOS		UNICOM			
CTAF		URL
